

**Bunbury Industrial Controls (BIC)** offers a diverse range of products and services including customised SCADA Systems.

SCADA is Supervisory Control and Data Acquisition. SCADA Systems include;

- Plant/Operator Interfaces
- Remote Plant Monitoring (Cameras)
- Plant Alarms and Events
- Trending and Data Acquisition

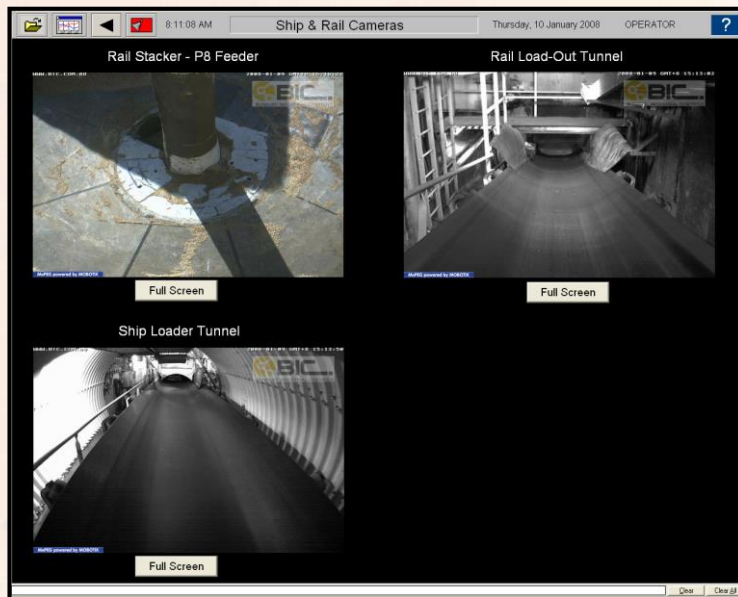

### Plant/Process Interfaces

Provides real time status of plant operation and faults. Allows operators to set speeds of motors and control flow of product from one central location.

### Remote Plant Monitoring (Cameras)

Provides a real time view of key plant areas, allow operators to prevent blockages and problems during operation.

### Plant Alarms and Events

We can provide alarms of critical plant and process faults, with historical data logging. Typically there are four alarms types ranging from "Critical" down to "Events".

### Trending and Data Acquisition

Provides real time and historical data of Plant Equipment, Typically used to track motor current and performance and production tonnages
